**Thursday, April 12, 2012 from 10:00 AM to 11:00 AM
Cameron University - CETES**

What is it like to be a security professional? What are the day to day experiences? What issues of professionalism, customer service, project management and career growth does a security professional encounter? How can you prepare yourself to be a more attractive job candidate, and what do security professionals look for in prospective employees? How is security managed at a large institution like Cameron University?

With over 20 years of experience in IT, Tim Marley is the first IT Audit Manager for the OU Board of Regents. In this role, he is responsible for developing and coordinating the newly created IT audit program for the University of Oklahoma, Cameron and Rogers State.

Prior to internal audit, Tim was a Senior IT Compliance Auditor for the IT security team at the University of Oklahoma, responsible for regulatory compliance and IT governance. Prior to coming to OU, he was the Network and Security Manager for the national clothing chain, Harold's, where his team managed the network and server applications as well as provided IT security administration including regulatory compliance.

Tim received his Bachelor of Accountancy degree from the University of Oklahoma in 1990. With numerous accounting and IT security certifications, Tim stays active in the IIA, IAPP, ISACA, ACUA, PCI SSC participating organization program, and the SANS/GIAC Advisory Board.
